

Course#: 2026-132-01

ReadyOp

ReadyOp empowers law enforcement agencies with a secure, cloud-based platform that brings planning, daily operations, and incident response together in one easy-to-use system. Accessible 24/7 from any location, ReadyOp streamlines communications, personnel management, resource tracking, situational awareness, and emergency coordination through real-time alerts, mobile-ready forms, and centralized operational data. From routine daily activities to critical incidents, disasters, and continuity of operations planning, ReadyOp ensures agencies have the information, tools, and connectivity needed to respond quickly, effectively, and confidently. During this two-day course, participants will learn how to navigate the ReadyOp environment, manage dashboards and rosters, build and automate forms, create communication channels, develop mapping layers and status boards, and apply Incident Command System (ICS) planning principles. Hands-on practical exercises will provide students with real-world experience using ReadyOp to support operational activities, incident management, and organizational readiness.
